

mamava® Pop-up Lactation Pod

We're pumped you're supporting breastfeeding parents at your event.

Pod placement: Pop-ups are for indoor use only.

For privacy, place away from overhead viewpoints.

We recommend a 10'×10' space for the pod.

Electrical: Pods require one standard 15A (or 20A) 120V outlet.

Setup: Pop-ups inflate in a few minutes via integrated pump and require power to remain inflated. Unplug them during off hours.

App listing (optional add-on at checkout): Your event will appear in the app once it begins. Be sure to upload photos that clearly show the pop-up's location.

Free return shipping: Keep the blue bin and cardboard box (for the banner) to reuse. Peel off shipping labels to find your return shipping label.

What's included

- Inflatable pod with integrated pump
- Blue extension cord
- 3-plug yellow GFCI outlet
- Zip ties for repacking the bin
- Detailed instructions
- Pull-up banner (shipped separately)
- Return shipping labels

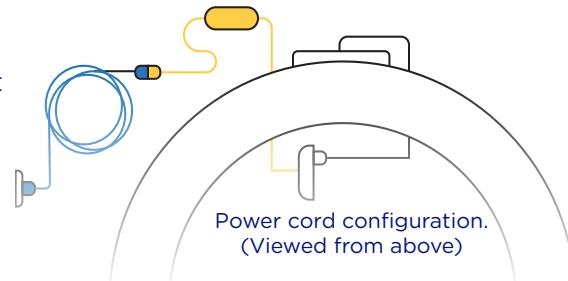

Questions? See mamava.com/rent-inflatable or contact fulfillment@mamava.com.

Setup

Open: Cut the zip ties on the bin. Store the bin for return shipping.

Position: Remove the deflated pod and unroll it on a clean, flat surface in the space you've dedicated for lactation. Set aside the 3-plug outlet and extension cord. Spread out the pod evenly so that the integrated pump is unobstructed. Ensure the surrounding area is clear of any obstacles or sharp objects.

Power: Plug the integrated pump cord (black) into the provided 3-plug outlet (yellow). Plug the 3-plug outlet into the extension cord (blue), and plug the extension cord into your electrical source. The pump will start when plugged in and inflate the pod.

Inflate: Confirm that the pump is unobstructed. As your pod inflates, it may need a hand to stand up until fully inflated. The pop-up will fully inflate in approximately two to three minutes. Pod requires power to remain inflated, but should be unplugged during off hours.

Furnish: Comfort is key! Place a small table and chair inside the inflated pod for parents. Extras like pillows, snacks, water, tissues, and sanitizing wipes help make the space inviting.

Outlet for breast pump: Ensure the 3-plug outlet (yellow cord) is inside the pod and placed near the table so parents can plug in their breast pumps.

Privacy: The pod door closes with strong magnets and can be guided shut from inside, with clips on both sides for added privacy. To exit, simply run a hand through the opening to release the magnetic pull.

Occupancy sign: Users can flip up the "Occupied" sign as they enter and return it to "Available" when they leave.

Banner, wayfinding, signage: If your event is listed on the Mamava app, use the search feature to find it and upload a photo of the lactation space. Set up the provided pop-up banner near the pod to identify the space. Additional signage and messaging at your event will help ensure it's easy to discover.

Return

Deflate: To deflate, simply unplug the pop-up. Make sure the pump remains unobstructed so air can escape. Pod will fully deflate in approximately eight minutes.

Pack: Place outlet, 3-plug outlet, and instructions in the bottom of the bin. Once the pod is fully deflated, fold it to the width of the bin. Tightly roll it lengthwise, pushing out air until compact. If possible, have someone help you. Roll the material around the pump to protect it from damage.

Ship: Secure the top of the bin using the provided zip ties. Peel the original shipping label off the bin to find your return shipping label beneath. Bring the bin and banner box to your nearest UPS location.
